The graph shows the upper and lower confidence limits based upon the baseline for the previous financial year (dotted lines). Plotted against these is the rolling 12 months detection rate data for the offence group chosen (black line). For reference, but on a different scale, the individual months' detection rates for the last 2 years are also shown. The baseline is calculated by using the March end rolling 12 months figure in the previous financial year and displayed in the bottom left of the graph.
